DATE MAILED: 03/04/2005				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/632,741	ACKERMAN ET AL.
	Examiner	Art Unit
	Joseph L. Perrin, Ph.D.	1746

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 20 January 2005.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 6,7 and 9-16 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 6,7, 9-16 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 20 January 2005 has been entered.

Response to Arguments

2. In view of applicant's amendment filed 20 January 2005, the status of the application is as follows:

35 U.S.C. §102(b) Rejections

The rejection of claims 6-7 & 9-16 are maintained for reasons of record. Namely, applicant repeats the argument that the prior art references do not inject an "anti-static liquid" or a liquid "configured to facilitate reducing a rate of formation of particulate matter" and continues to argue the method of using the apparatus notwithstanding the fact that applicant has 1) already received a patent on the method and 2) the instant claims are directed to the apparatus. Firstly, it is noted that the liquid "configured to..." is not positively recited and considered intended use which is given little patentable weight. Moreover, even if *arguendo* one were to give significant patentable weight

applicant's disclosure is not enabled for such a liquid (*i.e.* does not disclose a single species...what liquids read on this limitation?). Similarly, although applicant positively recites the washing system having "an anti-static liquid" as noted above (and cited below under 35 USC §112) such language is not enabled. Given the broadest reasonable interpretation the cited references disclose additives which the Examiner considers to read on the broad limitation.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 6-7 & 9-16 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a wash system having a first fluid being a cleaning fluid and a second fluid "configured to facilitate reducing a rate of formation of particulate matter" (*i.e.* an anti-static liquid), does not reasonably provide enablement for a wash system having a second fluid being an anti-static liquid (*i.e.* without a cleaning liquid). The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make or use the invention commensurate in scope with these claims. It is noted that applicant's "second fluid" is not positively recited and thus is considered intended use and not afforded significant patentable weight. However, applicant's original disclosure includes a washing system having a first fluid which is a cleaning fluid (*i.e.* for washing). Applicant's disclosure

Art Unit: 1746

further discloses a second fluid as an anti-static liquid. Thus, applicant's original disclosure is not enabled for a first fluid being an anti-static fluid. Moreover, regarding applicant's intended use, if such recitation was positively recited in the apparatus applicant's original disclosure would not be enabled for a second fluid "configured to facilitate reducing a rate of formation of particulate matter (i.e. anti-static liquid) and a first fluid being an anti-static liquid. Applicant's disclosure is silent with respect to species which read on such limitations.

5. Claims 6-7 & 9-16 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The different species of liquids defining "anti-static" critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). Claim 6 recites a first fluid "is an anti-static liquid". This encompasses any liquid which has that ability. However, the specification does not provide guidance with respect to any working examples (species) of anti-static liquids. Furthermore, the specification fails to provide guidance as to how to obtain such measurements for anti-static properties so as to define the meets and bounds of patent protection sought, apparently attempting to improperly incorporate by reference such anti-static liquids as commercially available. What liquids constitute an "anti-static liquid"? Without such information on what species of liquids fall within the scope of applicant's broad "anti-static liquid", one of ordinary skill in the art could not predict which liquids out of the vast number of known liquids would have anti-static properties and, accordingly, one of ordinary skill in the art would be required to perform undue experimentation to identify

Art Unit: 1746

whether a liquid would have “anti-static” properties even though no threshold (i.e. “anti-static” measurement and/or range) is disclosed. Therefore, one skilled in the art could not make and/or use the invention.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 6-7 & 9-16 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the washing system having a reservoir with a first fluid as a cleaning fluid. Applicant’s claims are directed to a washing system comprising, *inter alia*, a reservoir comprising an anti-static liquid. However, as disclosed by applicant’s original disclosure, an anti-static liquid is a coating liquid used either after or simultaneously with a cleaning liquid. This further raises an issue of indefiniteness since it is unclear how a washing system is capable of washing without a washing liquid. Clarification and correction are required.

Claim Rejections - 35 USC § 102

8. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

9. Claims 6-7 & 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,713,120 to Hodgens. Re claims 6-7 & 9-10, Hodgens discloses a gas turbine wash system (11) with a pump (compressor 14) connected to a nozzle (spray probe 20)

and fluid reservoirs (12/13) (see col. 5, lines 3-14). Re claim 9, Hodgens further discloses injecting fluids from both reservoirs (12/13), which reads on applicant's limitation of the system being "configured to inject a first fluid and a second fluid..." (see col. 5, lines 44-55). Re claims 11 & 12, Hodgens teaches that it is known to clean internal parts of gas turbine engines including compressors (see col. 1, lines 53-64). It is noted that the limitations directed to the types of fluids are considered intended use and given little weight in the apparatus claims. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). In the instant case, the claims language "said washing system configured to inject a first fluid and second fluid" merely requires the system to be capable of injecting the fluids since the fluids are not positively recited limitations in the apparatus. Thus, limitations directed to the fluids not positively recited are given little weight and only require the apparatus to be capable of holding/using such fluids (which Hodgens clearly discloses, as noted above). Claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). "[A]pparatus claims cover what a device is, not what a device does." *Hewlett-Packard Co. v. Bausch & Lomb Inc.*, 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990). (emphasis in original) It has further been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re*

Art Unit: 1746

Hutchison, 69 USPQ 138. As noted above, “anti-static liquid” is positively recited but is considered non-enabling. As best understood, the disclosure is construed to read on a coating liquid which would be capable of reducing the rate of formation of particulate matter. Accordingly, since the chelating agents of Hodgens (see chelating agents such as EDTA, col. 4, lines 10-40) would be capable of reducing the rate of formation of particulate matter (*i.e.* a coating would achieve this since the coating would prevent adhesion of particles to, for instance, a gas turbine), the apparatus of Hodgens reads on applicant’s claimed apparatus. Similarly re claims 12-14, since the fluid limitations are directed to intended use (*i.e.* “for injecting a fluid”), the limitations directed to the configuration of the fluids is considered intended use and given little weight. Re claims 15-16, these claims are directed to intended use (*i.e.* when the fluid is injected during a cleaning/treating operation) and given little patentable weight. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963). Recitation of Hodgens reads on applicant’s claimed invention.

10. Claims 6-7 & 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,059,123 to Bartos. Similar to Hodgens cited above, Bartos discloses the claimed structure of a turbine engine cleaning machine (10) including a pump (compressor 14),

Art Unit: 1746

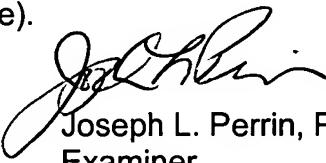

fluid reservoirs (18/20/22/24), and nozzle manifold (96) (see Figures 1, 2, 6, and relative associated text). As noted above, the non-enabling disclosure of "anti-static liquid" is construed to read on a coating liquid which would be capable of reducing the rate of formation of particulate matter, and the intended use of types of fluids used and operation of the apparatus are given little weight (see above). Accordingly, since the preservative coating of Bartos would be capable of reducing the rate of formation of particulate matter (*i.e.* a coating would achieve this since the coating would prevent adhesion of particles to, for instance, a gas turbine), the apparatus of Bartos reads on applicant's claimed apparatus. Recitation of Bartos reads on applicant's claimed invention.

Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph L. Perrin, Ph.D. whose telephone number is (571)272-1305. The examiner can normally be reached on M-F 7:00-4:30, except alternate Fridays.

12. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael E. Barr can be reached on (571)272-1414. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

13. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
